10305B	5-7cm 5kg

Pacific Coral Aragonite

Aragonite maximises filtration capacity. The enormous surface area houses large quantities of beneficial nitrifying/denitrifying bacteria and millions of microbes. Buffering capability ensures a stable alkalinity and PH level at around 8.2 in sea water and cichlid aquariums. Quickly creates a natural biological balance which discourages the growth of nuisance algae.

- Provides a natural sand bed
- Helps achieve a natural biological balance in aquariums
- Provides enhanced buffering capacity, diminishing any PH fluctuation
